

if Effect is consistent with Precondition

Effect_absorptions = Effect.getInstantiations(Precondition)
-- Effect elements replace elements from Precondition if consistent, and denoted with replaced_id

for each eff_abs... merge into graph.
(1) Find elements in graph with replaced_ids == element.id, and merge
(2) add elements with no replaced_ids

then merge new step into graph
(1) Find elements in graphs with replaced_ids == elementid, and merge
(2) add elements with no replaced_ids
